

AixBOMS BSM

AixBOMS BSM verwaltet eine Hochleistungsinfrastruktur

Highlights

-  Verwaltung einer Hochleistungsinfrastruktur im Carrier-Segment
-  SLA-konforme Service-Definition unter Berücksichtigung von Ports, Bandbreite, IP-Adressen (IPv4 und IPv6) und Verfügbarkeit
-  grafische Darstellung der Service-Strukturen im AixBOMS Service Tree
-  AixBOMS Impact Analyse zur Feststellung der betroffenen Services beim Ausfall einer Komponente
-  für Internet-Provider typisches Data Center Infrastructure und Cable Management (Verbindungsanalyse, Rack- und Patch-Management, Flächenoptimierung, Green-IT, ...)
-  Datenlieferung für Endkunden-Webportal

The screenshot displays the AixBOMS BSM software interface. On the left, a 'Service Tree' shows a hierarchical view of services, including 'AixBOMS Last Customer Services', 'AixBOMS Last Infrastructure', and various 'AixBOMS Infrastructure' components. The main window shows a network diagram with nodes like 'VIRT-SRV-000127', 'FRA Back Office Knowledgebase', 'FRA Sales VMs', 'FRA Back Office VMs', 'George Cook', 'SLA 2 Stufe (2B)', and 'FRA Virtual Solutions'. Below the diagram, a table lists configuration items with columns for 'Identity', 'Template', 'Class', 'Usage', 'Manufacturer', 'Type', 'Parent Identity', 'Serial Number', 'Inventory Number', 'Condition', and 'Date'.
