

AixBOMS SMB

AixBOMS SMB
Out-of-the-box Solution for
Small and Medium Business

- No customizing required
- AixBOMS key features RackView Editor, Floor Plan Editor, Area Plan Editor or Power Management for IT and technical staff
- Do it yourself: self installation, self implementation, self population

Big Benefits for Small Businesses

The **AixBOMS SMB** (Small and Medium Business) product line is an entry-level out-of-the-box solution. It has been designed for smaller and medium size companies looking to address the specific requirements of their IT and technical staff and supports our key features **RackView Editor, Floor Plan Editor, Area Plan Editor, Power Management and Business Service Management**.

AixBOMS SMB is prepackaged in a way which allows the customer themselves to take care of all steps necessary for a successful deployment of the software without the need for costly launch projects or customizing. This product line is particularly suited for customers whose IT environment has less than 50,000 database objects to document. Features include smart visual and graphical tools (editors and wizards) for **cable and data center management** tasks, which are part of the day-to-day business in small and medium size companies. The editors and wizards are closely integrated with the underlying database, so that easy-to-understand visual images represent potentially highly complex database objects with relations to other database objects. This functionality is extremely helpful when dealing with IT infrastructure overviews, distribution cabinets and their content or trying to create, analyze and understand connections and relationships between objects.

AixBOMS SMB functionality can be extended at any time by purchasing additional modules or CI packages; it is also possible to upgrade from AixBOMS SMB to AixBOMS Enterprise.

AixBOMS SMB

Project Ressources:

- people
- money
- time

- self installation
- self implementation
- self population
