

What do we do at AixpertSoft?

AixpertSoft is a privately owned software company based in Aachen (*Aix-la-Chapelle*), Germany.

AixpertSoft started out as a part of the IT consulting firm ComConsult Kommunikationstechnik GmbH until it became a subsidiary in 2006. Since then, our sole concentration has been software development. This focus combined with the experienced management, sales and marketing, and development teams active within our parent company since the early 1990s has allowed us to provide our customers with professional-grade products and services of exceptional quality. Our customers include many Top500 companies dealing in industry, finance, research, the public sector, and other IT services. This rapport has expanded our wealth of knowledge of these branches and their specific IT requirements.

Our longstanding experience in the documentation and management of IT infrastructures has afforded AixpertSoft a comprehensive expertise in Data Center Infrastructure Management (**DCIM**) and IP Address Management (**IPAM**). The AixBOMS product line is known as an Advanced CMDB due to its outstanding properties and early adoption of progressive technologies, such as IPv6, hardware and software virtualization, cloud computing, and SaaS.

After celebrating AixBOMS' 10th birthday in 2012, AixBOMS was named the winner of the **Innovationspreis-IT 2013 (Initiative Mittelstand)** in the **IT-Service** category.

Shortly thereafter, AixBOMS was also awarded the **eco Internet Award 2013** as "**Best Solution**" in the **Housing/Hosting/Data Center** category by the **eco e.V.** (Association of the German Internet Industry). AixBOMS has also been selected as one of the **Top15 DCIM Tools** by **DataCenter-Insider**. Both in 2015 and 2016 AixBOMS received the prestigious **Silver IT-Award** presented by DataCenter-Insider, based on their readers' choice! Today, AixBOMS is used by about 15.000 users.

**eco Internet Award 2013:
 Official Statement from the Jury**

"AixBOMS CMDB was developed especially for the planning and efficient operation of data centers, and as modern visualization technology it convinced the jury absolutely. The software includes a unique planning-mode, and displays information in the way it is needed. The underlying standardization makes this an information hub for all management areas in IT business. In the process, it also covers potential savings in use of space, energy and climate control."

About AixpertSoft GmbH:

AixpertSoft's primary focus is the development and distribution of Data Center Infrastructure Management (DCIM) software solutions based on Advanced CMDB technology.

Together with our parent company ComConsult Kommunikationstechnik GmbH, we have more than 25 years of experience in project planning and development, thus providing a solid foundation for integrating future-oriented methods and the most cutting-edge platform technologies in the further development of AixBOMS. For these reasons and many more, numerous Top500 companies have chosen AixBOMS for their data management needs.
