

## Why can't DCIM be used within web browsers?

With the ever increasing adoption of mobile devices, tablets and smartphones have become indispensable tools for managing both the personal and business aspects of our lives with our fingertips. Naturally, we expect **DCIM** (Data Center Infrastructure Management) tools to follow suit. The rapid advancement in mobile technology has allowed for highly complex technical interrelations to be graphically served and implemented in ways that extend past the capabilities of web browsers.

Therefore, we are working on a new "DCIM App" to add touchscreen functionality to the list of user-friendly features, such as drag & drop and multiple windowing, already implemented in AixBOMS. Our goal is to provide AixBOMS users with *Excellence in Documentation* even while on-the-go.
